We Have A Cancer Vaccine, So Why Aren't We Using It?

By Ana-Marija Dolaskie — February 20, 2018

The American Cancer Society estimates that more than 13,000 cervical cancers will be diagnosed in 2018. Of those, more than 3,000 women will die.

Cervical cancers stem from the Human papillomavirus, a sexually transmitted infection. And it can be prevented with a cancer vaccine already in place. Yet, the rates of immunization among young adults are low.
