

# Scared to Death: How Chemophobia Threatens Public Health

By ACSH Staff — January 18, 2011

[1] The American Council on Science and Health (ACSH) is pleased to

announce the release of a new book and companion friendly, abbreviated position paper, *Scared to Death: How Chemophobia Threatens Public Health*.

The book is authored by Jon Entine, a scholar with the American Enterprise Institute and highly regarded science journalist.

In response to the growing level of chemophobia -- the irrational fear of chemicals -- among the American public, ACSH compiled this resource book and position to educate legislators, industry, media, consumers and parents on the actual risks of chemical exposure and use in everyday products.
